

---

**Product Name:**

Khaki Ipseal H/T Inorganic. Seal. MSRR9140

---

**Product Number:**

IP9184-KH-R1

---

**Product Description:**

Ipseal is an inorganic protective coating used as a barrier on Ipcote IP9183-R1, IP9253, PL219, Ipthin IP9356.

All of the Ipcote coatings are conductive, sacrificial coatings and inherently porous. Iperseal seals this porosity without detracting from their sacrificial properties. It also creates an electrically non-conductive barrier coat. The use of Iperseal on top of these products results in a smoother, harder coating which provides a barrier against carbon deposits etc extending the useful life of the base coat and a smoother finish which enhances airflow characteristics and therefore engine efficiency.

IP9184 is for use at temperatures up to 800°C (1400°F). This material also has capabilities as a coating in its own right, being water based with no VOC's, this coating has high temperature resistance up to 800°C on such metals as nickel. It has shown a 70% reduction in Alpha Case corrosion on titanium at 650°C at 3-5 microns.

For repair touch up's refer to PL270 Khaki.

---

**Approvals/Specifications:**

- MSRR 9140 (Previously MSRR9355)
  - IP9184-KH-R1 Khaki; Rolls Royce Code: 139265
  - Omat 7/168B – Khaki
  - NSN: 8030-99-434-2295
  - Messier Dowty: PS2550
  - Turbomeca LB714
  - GE: A50TF196 Class E
  - Alternative to Sermaseal 570
  - Siemens: 552208
-

---

## Performance:

- Tested to specification MSRR 9140 (under test to CPW 404)
- Smooth eggshell finish
- Typical film thickness 4-6 microns per coat (0.2 thou)
- Operating temperature -40°C to 800°C (1420°F)
- Less than 0.6% hexavalent chrome

---

## Components:

Singe Pack Product. May be thinned with water for spray application. Where low humidity is present within a spray facility the addition of 5-10% by volume of water may be required.

---

## Application:

### Surface Preparation:

Ensure that surfaces are clean and dirt free.

### Paint Preparation:

Stir well before use. All separated materials must be re-incorporated into the milk product. No time limits are specified for the mixing operation. The operator must be satisfied that the product including any thinning solvent is thoroughly missed before use. Where mechanical mixing is employed care must be taken to not heat the product to above the maximum storage temperature. Mixing in open containers should be limited to <10 minute periods to ensure that solvent evaporation does not compromise the product. Shaking or rolling in closed containers is an acceptable mixing method for small volume products supplied ready for use.

### Application Method:

Spray applied coating. Refer to application sheet IPAS666

### Drying Curing:

- **Air Dry:** 10 minutes
- **Heat Cure:** Pre-bake for 30 minutes @ 80-100°C, 30-60 minutes @ 350°C

---

## Technical Properties:

<b>Supply Viscosity:</b>	29-35 ISO3 Cup @ 23°C
<b>Flash Point:</b>	N/A
<b>VOC Content:</b>	0g / l
<b>Colour:</b>	Khaki
<b>Pack Size:</b>	1 and 5 Litre

# Technical Data Sheet

---

<b>Density:</b>	1.29kg / litre
<b>Gloss:</b>	N/A
<b>Thinner:</b>	Water
<b>Solvent/Clean Up:</b>	Water
<b>Catalyst:</b>	N/A
<b>Theoretical Coverage:</b>	20.7sq m / l @ 10 micron

---

## Storage:

**Shelf Life:** 12 months temperate; 6 months tropical

**Before use, refer to Product Safety Data Sheet**

---
